Privacy Notice for Children

Introduction

This Privacy Notice explains why St Thomas Medical Group collects information about you, how we keep it safe and private and how we may sometimes use that information.

Why do we collect information about you?

Doctors and nurses have to keep a record about your health and any treatment that we give you. This is called your 'GP record' and it helps us to look after you.

Your GP record is only used by doctors and nurses to keep you well and to make you better when you are poorly.

What do we record?

Every time you see a doctor or a nurse at the surgery we make a note of your visit in your GP record. We also keep notes of when you have been seen somewhere else, such as the Accident and Emergency department of a hospital.

We keep a record of:

- Your name, address and the details of the people looking after you (such as your mum and dad)
- Your home telephone and mobile number (if you have one), and your email address if you want us to have it
- Details of the times you have seen a doctor or a nurse, here at the surgery or at any other place
- Any tests that you have had (such as an x-ray)

How we keep your information safe and private

Your GP record is kept on a secure computer system called EMIS. Only doctors, nurses and members of our admin team can look at your information.

If you are old enough to have a mobile phone, or an email address, then we will only use that to contact you when it's about 'medical stuff' – like reminding you about an appointment that you might have to see your doctor at the surgery.

If you don't want us to text you anything at all, then just tell us and we will make sure that doesn't happen.

Unless you want us to, we won't use your email address to tell you about other things happening at the surgery, like new doctors and nurses working at the surgery.

All your info is very private and we won't tell anyone else about it unless they are also looking after you, or trying to get you better and we would only tell them if they *really* need to know about it.

So, at the surgery, the doctors, nurses, and the admin teams can look at your GP record, if they need to. If they do, they are not allowed to tell anyone else about it.

If the doctors and nurses at the surgery don't know what's wrong with you, we will ask someone at the hospital to see you – and we will give that doctor or nurse information about you and what's making you feel unwell.

But sometimes we have to tell other people about stuff in your GP record.

Sometimes, 'it's the law', and we will get in big trouble if we don't.

So, if a judge tells us to, then we will have to give them information about you. If the police tells us to, then sometimes we have to tell them as well.

If you're ill, and that illness could be spread to all your friends and classmates, then we might need to let the right people know – so that they can try to make sure that no-one else catches that illness as well.

And sometimes we have to tell other people if we are worried that you, or someone else in your family, could be in danger.

Whenever we can, we would always tell you if we were going to tell someone else about you and GP record.

Some other medical places, such as the Accident and Emergency department at our local hospital, or other doctors and nurses that you might see when the surgery is closed, can take a peek at your GP record – but only if they ask you (or your mum or dad) first. The information in your GP record could be very helpful to them when they are trying to make you better.

You don't have to say yes if they ask you, and you can ask the surgery not to allow anyone else to be even able to look at your GP record like this if you want.

Other computers

The doctors and nurses at the surgery can also look at some of your hospital records – for example, when you went to Accident and Emergency with your broken arm. We can see what the x-ray showed. That information can be very useful to us when we see you in the surgery ourselves.

Any Questions? If you have any questions then please do ask someone at the surgery.
